# FUNCTION AND STYLE SHOULD NEVER COMPETE

At Origins Living, we create mirrors and accessories with purpose -  
designed to be both practical and beautiful.

Every contour, every detail, every proportion is considered with  
intention. Not for trends, but for how it feels to live with: the reflection,  
the rhythm, the ritual.

Because everyone deserves good design. The kind that enhances  
everyday moments in the spaces we call bathrooms.

## BATHROOM ZONES

Luminaires chosen for use in bathrooms are subject to certain wiring regulations and must be selected and erected, so they are suitable for the external influences likely to occur at the point of installation. These influences include steam (leading to condensation), falling water droplets and sprays or jets from shower heads.

All luminaires can be assigned an IP (Ingress Protection) rating. This relates to the protection afforded by the light fitting against penetration by solid particles or moisture. The IP rating consists of two numbers: the first refers to protection against solid particles, the second refers to protection against moisture.

For bathroom use, the second number is the most significant. The required IP rating for light fittings in bathrooms depends on their actual location in the bathroom. The regulations divide the bathroom into zones (see illustration) which determine the IP rating. All bathroom luminaires must be installed on a 30mA RCD-protected circuit, in accordance with IEE regulations.

**Zone 0** Interior of bathtub or shower tray – IP68 and low voltage supply (max 12v).

**Zone 1** Perimeter of bathtub or shower tray up to 2.25m above floor level – IP44.

Use IP65 where water jets are used for cleaning purposes.

**Zone 2** Perimeter 0.6m wide around Zone 1 and a 60cm radius above washstands – IP44.

Use IP65 where water jets are used for cleaning purposes.

**Outside of Zones** There are no stated requirements for IP. Luminaires should be suitable for their location and provide adequate protection against electric shock.
